592 578 friendly terms tended to join in forming a household, and third, it was probably considered desirable to suppress ill feeling within the house.

571 578 592 The unfriendliness between Maibu and the men of Aloari's family existed side by side with close gift-giving obligations between their two houses. According to Aloari's brother Oirupa, he *pans* (gives) to all the people of his own house and also to all the people of Maibu's house. Residence was the crucial factor, for when Yanahi and Mayuva moved from his house, Oirupa no longer gave to them. Similarly, the two other houses had close gift-giving ties. The women united according to this house division when an attack was thought imminent.

114 592 602 Insofar as can be ascertained from Quain's genealogical data, there were no special kin bonds between the households of Maibu and Aloari, on one hand, and Jakwanari and Nitvary, on the other, to explain this moiety-like division. But it is of interest that the houses of both Maibu and Aloari were the large type of domicile, like those of the Kamayurá, whereas the other pair of houses were the smaller "true" Trumaí type. It is possible that the residents of one pair of houses, perhaps the smaller, were the descendants of inhabitants of the southern village.

The Nuclear Family

594 Despite the importance of the household and the bilateral consanguineal group, the nuclear family, consisting of man, wife, and children, was still the basic unit of Trumaí society and economy. The biological family could provide nearly all the necessities of life within the previously outlined framework of individualized production and division of labor between the sexes.

The responsibilities of child-rearing fell largely on the nuclear family. The Trumaí showed a fondness for children, and it was not unusual for other adults in the house to play with them and watch over them; but the chief attention came from the parents, and the dependence of the young upon the father and mother was stronger than upon the rest of the household.

[513] 593 The conjugal group had its own hearth near which its hammocks were strung. Very young children slept with the mother or, if motherless, with the father. Couples were companionable and spent much of their leisure time with each other. It was common for a man and wife to sit in the shade of their house in the afternoon while he made arrows and she worked on a hammock. At other times the couple would go on a short [832] gathering trip, or just idle around the house. Embraces or mild sex play often occurred in public between younger mates.

593 156 Some unions were closer than others. Aloari and his wife Yumunuwa spent more time together and showed more affection than did other couples. They were both young; he was virile and aggressive, and she

four, three between five and seven, two between seven and ten, and the other two between ten and twelve. The little girl could not as yet walk alone. The two youngest boys could, although occasionally they still suckled at their mother's breasts.

The Trumaí infant was subjected to very little training. Rarely was the very young child told not to do anything. However, all the children except for Katsits, the infant girl, knew that they should defecate in the bush and urinate away from the village plaza. Katsits very often eliminated in the house, or while she was in her mother's arms. X'utsi, the mother, merely scraped a bit of dirt over the wet spot. She gave no indication to the child that this was an undesirable act, and the child took no note of her own activity. Exactly how a child learned to exert self-control is not clear, but it was probably by emulating older children and adults, whose toilet habits were hardly a secret.

The child suckled until it was five or six years of age, although it began to partake of the ordinary diet by the end of the first year. Yumunuwa said that she suckled Tsirikoan three times a day: morning, noon, and evening. This was not a strict regimen, for the boy often crawled into her lap or straddled her waist and suckled at odd hours. Until about five years old, the child slept in the mother's hammock, or if motherless, with the father. Often it slept with the mother's breast in its mouth, and if it awoke during the night, it suckled until it fell asleep again.

The nursing of older children is a perpetuation of the infantile pattern, and it is indicative of the lack of stress on weaning. Also, because of infanticide and the low birth rate, there is little cause for sibling rivalry among the Trumaí.

Help was given the child in learning to walk and talk. The men appeared to devote more attention to this phase of upbringing than the women. Katsits was often walked about by her father, and sometimes by Maibu or other men who lived in the same house. Her father was eager to have her walk by herself so that he would not need to coach her, but nevertheless he and the other adults showed the greatest indulgence and patience in this task.

Part of the father's anxiety was doubtless due to the taboos which restricted his activity until his child had learned to walk. The most important of these was a ban on sexual intercourse. When Katsits developed colic, it was generally thought to be the outcome of coitus between the parents. Certain foods were also forbidden the father, one being seasoned fish hash, which was a great favorite. It is not known whether the mother was also required to observe food taboos.

More emphasis was placed on teaching the child to speak. The adults and older children made repeated attempts to put words into the mouths of the very young, saying the same phrases over and over again. In this

APPENDIX

Buell Quain, in a letter to the late Dr. Ruth Benedict written from Brazil on December 21, 1938, summarized several aspects of Trumaí culture which have a direct and immediate bearing on their decline. Following are excerpts of ethnological interest from this letter, which was discovered after this monograph was completed:

"They are a dying culture. Each generation improves its imitation of Kamayurá culture. Everyone in the village knows a few Kamayurá words. Almost all the songs in the manioc fertility ceremony are Kamayurá. Half the people in the village can carry on a conversation in Kamayurá with ease. One household (there are four) uses Kamayurá in preference to Trumaí. The mother of the house owner speaks no Trumaí; she is a Kamayurá woman who has lived with the Trumaí for about twenty-five years. The child of the household, a ten year old girl, confuses Kamayurá kinship terms with Trumaí in classifying the village. All Trumaí women between twenty and forty have been captive wives among the Kamayurá (which puts the Trumaí men in a peculiar position which they fully but fruitlessly resent) .... They have lots of disorganized leisure. They are sleepy (in part because of insects and fear throughout the night). They are ready to imitate not only the Kamayurá, but me, in petty daily habits. No outsider speaks Trumaí.

"There is nobody among them who volunteers information of ethnological value. For three months I dug for structure and got very little... Dullness cannot be attributed to the climate.

"The village is small .... Each of the four households — now five because of a recent split — are organized, or perhaps disorganized, according to different sociological principals. Three of the seventeen women are of foreign birth; one is Kamayurá, one is Mehinaku, and one is Suyá. The first two speak no Trumaí. A fourth woman with ringworm and two sick children is said to be Yaulapití, but she is well set in Trumaí culture. Nobody claims her as a relative (in part because of aversion toward her ringworm); hence she is used as a prostitute by every man in the village — she is the village joke. Among the men, I have found remarkably uniform responses to various 'tests'. (I said 'Draw a picture of a woman and a man.' Every man but one drew the woman first and oriented her in a distinctive way on the paper. The women showed no such regularity. One Kamayurá man tested also lacked this stereotyped response.)
